

BI-FOLD DOOR

Versatility, Elegant, and Security

Features

Engineered for versatile and design-friendly application, our bi-fold door solutions are designed to be a modern alternative to traditional shutters. They enable retailers to securely close stores without compromising visual merchandising or showcasing displays.

Applications

Choose the configuration that best suits your requirements. is found in Shopping Malls, Airports, Schools, Hospitals, Hotels, Kiosks, Counter-tops, Eateries, Condominiums, Clubs, Private Housing and so on.

Design

May be fabricated to a maximum height of 4.0 meters but is unlimited in the span of the shutter. May be parted from the center or opened from one end of your premise. The housing to contain the shutter may be situated at either end of the shutter or tucked away in an obscure corner. The shutter layout may be curve, wave or it may encircle the entire premise.

Operation

Is manually operated by hand. Being lightweight, they glide easily on heavy-duty ball-bearing rollers when maneuvered.

Finish

The standard finish is natural anodized with the option to powder coat in a color that compliments the surrounding.

Inserts

Comes with in-filled Clear Polycarbonate. Clients have the option of using perforated panels or a combination of both.

Security

Uses a flush bolt locking system that consists of a main lock with key and twist-locks located at fixed intervals. The main lock can be opened with key from inside or outside whereas the twist lock only operates from within the enclosure. This gives added security and provides you with a peace of mind.
